## **DETAILED ACTION**

### ***Election/Restriction***

1. Applicant's election without traverse of the Group I invention (claims 1 and 2) is acknowledged. Claims 17-24 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made without traverse in Paper No. 7.

### ***Priority***

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 U.S.C. § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

3. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by US 6,177,301 to Jung. Jung teaches, with reference to figures 6 and 7A, a thin film transistor comprising: an insulating substrate (not shown, see col. 5, lines 41-44);

Art Unit: 2815

a polycrystalline silicon island 61 formed on said insulating layer, a grain size of the polycrystalline silicon island being elongated along one direction (see figure 7A, the grains 73 elongated across the page); and

a source region 71, a channel region 74 and a drain region 72 arranged in said polycrystalline silicon island in parallel with the direction.

With regard to claim 2, Jung teaches that the insulating substrate may comprise a glass substrate (col. 4, lines 25-26).

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references teach a polycrystalline layer formed having a grain size elongated parallel to the source, drain and channel (Ogawa fig. 5, Unagami col. 6, line 63).
